

Conservationists Sue Miami-Dade County for Approving Water Park, Hotel and Retail Development That Will Devastate Environmentally Sensitive Land Against Voters' Wishes

October 04, 2022

Miami, Fla. — Today, [Bat Conservation International](#), [Tropical Audubon Society](#), and a citizen of Miami-Dade County filed a lawsuit against Miami-Dade County for leasing environmentally sensitive county-owned land to a water park, hotel, and retail developer in direct violation of a voter-approved referendum that prohibits commercial use and development on such land. According to [the complaint](#), the county entered into a lease agreement on June 23 with Miami Wilds, which seeks to build a 67-acre development on land that is located in the Richmond Pine Rocklands, which contains the largest and most biodiverse fragment of critically endangered pine rocklands outside of Everglades National Park. The land's unique properties make it vital to the survival of some of the most federally endangered species in Florida, including the [Florida bonneted bat](#). The proposed development site, adjacent to Zoo Miami, is part of a critical area that supports dozens of rare animals, plants, and insects found nowhere else on Earth. In addition to the Florida bonneted bat, it includes the endangered [Miami tiger beetle](#), the [Bartram's scrub-hairstreak](#) and the [Florida leafwing butterflies](#), and the [Eastern Indigo snake](#). Rare plants like [Florida brickell-bush](#) and [Carter's small-flowered flax](#) are also present around the proposed development site. At issue is the 2006 voter-approved Metrozoo referendum that allows for commercial development of county-owned property provided it is on land that is not environmentally sensitive. The plaintiffs, including citizen Jose F.

Barros, argue that the county violated the referendum because the number of federally endangered species that live and forage in the proposed development site clearly show that it is environmentally sensitive land. The plaintiffs also say that the county violated Article 7 of the Miami-Dade County Charter by entering into a lease for the development of environmentally sensitive public park property without securing approval from Miami-Dade voters. “The proposed Miami Wilds project is a lose-lose,” said Bat Conservation International Executive Director Mike Daulton. “It’s bad for the environment and bad for Miami families. This ill-conceived project will cause the extinction of Florida wildlife while raising costs for Miami families to visit the zoo. The project is illegal and violates the will of Florida voters. It’s time to go back to the drawing board.” “Urgent conservation action must be taken to save the Florida bonneted bat from the growing threats of habitat destruction and sea level rise,” said Tropical Audubon Society Senior Conservation Director Lauren Jonaitis. “Every species counts because biodiversity is essential to the ecosystems we all rely upon to eat, breathe and thrive. But not only is the survival of this rare mammal crucial, the protection and preservation of pine rockland, a globally critically imperiled habitat, is also at stake.” The plaintiffs are represented by pro bono counsel Enrique D. Arana, Brian A. Hart, and Patricia M. Patino of Carlton Fields in Miami.
